Final overlap diagnostics at 100 ms (two production seeds pooled)
Mature A–A overlap
preferred A--A overlap = 0.10 μm
median = 0.101 μm
status-2 links
geometric overlap (μm)
Productive A–M overlap
full head-bearing half = 0.675 μm
median = 0.614 μm
status-2 actins
primary head-bearing half (μm)
A–M placement remains imperfect
32% barbed ends inside thick filament
thick-filament tip = 0.75 μm
status-2 actins
barbed-end distance from M-line (μm)
A–M uses each mature actin's primary material-head partner. The old run reached the A–A target but did not fully solve sarcomeric A–M placement.
