Proposed A-band contact energy

Illustrative k = 1000 pN/µm · myosin half-length = 750 nm · approach = 50 nm · taper = 100–130 nm

A/B show u = ½ k W(ρ) [h + a − |z|]₊²; C integrates u over a 40 nm radial connector (normalized by length).
White arrows: normalized −∇U direction, not force magnitude; U < 1 pN nm is blank. Separate core steric energy is omitted. Proposal, not trajectory data.
